from blur to clear™

Free yourself from reading glasses after Cataract surgery!

Conventional cataract surgery removes the cataract and replaces it with a monofocal lens. These lenses allows you to see only far but not other activities such as looking at your watch, reading your SMS or the label on your canned food!

For a hassle free lifestyle with no glasses to worry about, ask our friendly consultants how a Multifocal Lens can help you recover your reading vision.

白内障手术让您的眼睛重获阅读的自由！

传统白内障手术在去除白内障后，将单焦点人工晶体植入眼睛。这类型的晶体能帮助您恢复远视力，但不能让您看清楚其它比较近的东西，如手表、电话短信及 罐头上的标签。

若您想重获无眼镜烦恼的生活，请向我们友善的顾问了解多焦点镜片如何能帮助您恢复阅读的视力。

<----- Monofocal 一般单焦点 -----> <----- **Multifocal 一般多焦点** ----->

While majority of multifocal patients achieve independence from glasses for most activities, glasses may be needed for long periods of reading and small text.
