No-Blade iLASIK*

iLASIK* is the No-Blade vision correction procedure 100% customized to the unique characteristics of each eye.

iLASIK* enhances your clear vision experience by correcting your short/long sightedness, astigmatism, and treating other vision imperfections such as glare & halos.

iLasik Procedure

Individualized Vision Profile

Wavescan technology is used to obtain a 3D map of each eye for a customized treatment for each individual eye.

Personalized Corneal Flap

Intralase Femtosecond laser is used to create a corneal flap.

Custom Laser Vision Correction

Advanced CustomVue is used with VISX Excimer laser to correct your vision.

Key Benefits of iLASIK*

25x Precision

99.5% Achieve 20/20 Vision*

* VISTA is one of the first LASIK Center in South East Asia that uses the iLASIK: iFS™ 150 System + Advanced CustomVue Technologies powered by iDesign. The original iLASIK has been used by NASA & US Military since 2005.
 ^ Even with the best correction method, some people may still experience glare & halos after treatment. Individual results varies depending on healing.
 ^^ Retreatment fee is chargeable at 75% of prevailing price after 12 months.

Visian ICL® (Implantable Collamer Lens)

Nothing Is Removed From Your Eye

Unlike other procedures, no corneal tissue is permanently removed from your eyes.

Quick, Painless, Simple

Performed only under topical anaesthesia, 15 minutes is all you need per eye.

High Range of Correction

ICL is able to treat severe shortsightedness of up to -20.0 diopters, where Lasik may not be suitable.

Procedure

A 3mm incision will be made on the cornea.

The ICL lens is inserted into the space between the iris and the natural lens.

The ICL will then be adjusted into the right position.

Key Benefits of Visian ICL®

Great Vision Almost Instantly

Quick Recovery Time

Designed To Be Permanent, Yet Removable

Does Not Cause Dry Eyes

Reversible

High Range of Correction

UV Protection

Reduced Glare & Halos
